Passage No. 2

Read the passage carefully and answer the questions that follow.

Plastic: Yours to Recycle

Plastic recycling refers to the process of recovering waste or scrap plastic and reprocessing the materials into functional and useful products. The activity is known as the plastic recycling process. The goal of recycling plastic is to reduce high rates of plastic pollution while putting less pressure on virgin materials to produce brand new plastic products. This approach helps to conserve resources and benefit planets from landfills or unattended dumpsites such as incinerators.

Plastics are durable, lightweight and inexpensive materials. They can readily be molded into various products which find uses in a plethora of applications. Every year, more than 100 million tons of plastics are manufactured across the globe. Around 200 billion pounds of new plastic material is manufactured, bought, transported and consumed into millions of packages and products. Consequently,

Q.1. Read the following news report and answer the following questions.

After Icelanders, Swiss hold wake for a glacier lost to warmir

While Switzerland has been a leader in the fight against climate change, it is now holding a wake for a glacier that has melted away. The glacier, which was once a major attraction for tourists, has disappeared, leaving behind a large, dark, rectangular object. The Swiss government has announced that it will hold a wake for the glacier, which was once a major attraction for tourists. The wake will be held in the village of Zermatt, where the glacier once stood. The wake will be a day of mourning for the glacier, which was once a major attraction for tourists. The wake will be held in the village of Zermatt, where the glacier once stood.
